

SUMMARY

SQL Project: Music Store Analysis

 I built a SQL project analyzing a digital music store's sales and customer behavior. The goal was to answer business-critical questions using real-world datasets and sharpen my SQL querying skills across Easy, Moderate, and Advanced levels.

Key Highlights:

- Identified top customers, highest revenue cities and most popular genres by country
- Used joins, aggregations, window functions, and CTEs to extract insights
- Wrote optimized SQL queries to support marketing, revenue strategy, and customer analysis

Skills Demonstrated:

- SQL (PostgreSQL-style syntax)
- Subqueries & CTEs
- Recursive queries
- Business Intelligence logic

Sample Questions Solved:

- Who are our top spenders?
- Which genre is most popular per country?
- What city generates the most revenue?
- Who listens to the most rock music?
